# School Management System

Description:

School Management maintained by the school is the way they are able to find data about every single student. Using a basic C application we can manage the data of the school.

The functionality of the School Management System Application is mentioned below:

1. Add Student Details
2. Find the student by the given roll number
3. Find the student by the given first name
4. Find the students registered in a course
5. Count of Students
6. Delete a student
7. Update Student
